Color Television Type

**AUDIO POWER AMPLIFIER****Beam Pentode**

Construction ..... Miniature T-6½  
 Base ..... Button 9 Pin, E9-1  
 Basing ..... 9CV  
 Outline ..... 6-4  
 Maximum Diameter ..... 0.875 In.  
 Maximum Seated Height ..... 2.812 In.  
 Maximum Overall Height ..... 3.062 In.

**NOTES:**

- (1) When the heater and positive voltages are obtained from a storage battery by means of a vibrator, the maximum values of the plate and Grid No. 2 voltage is 250 volts and the plate dissipation is 9 watts.

- (2) Grid No. 2 connected to plate.
- (3) Common cathode resistor for push-pull applications.
- (4) Per grid.
- (5) Measured from grid No. 2 to plate.
- (6) For Pentode Operation—Class A Amplifier Service, the maximum signal power output and total distortion are measured at fixed bias and therefore represses the power output available during the reproduction of speech and music. When a sustained sine wave is applied to the control grid the bias across the cathode resistor will readjust itself as a result of the increased plate and screen grid currents. This will result in approximately 10 percent reduction in power output.
- (7) Measured with fixed bias.
- (8) Grid No. 2 taps located at 43% of primary winding.
